(Check after go-live) Are all touch screen positions (buttons) working when a screen protector is used. Network Specific Checks Does the app behave according to specification if connected to the internet through ViFi? Does the app behave according to specification if connected to the internet through 4G? Does the app behave according to specification if connected to the internet through 4G? Does the app resume working when it gets back into network reach from 2 outside reach of the network? Update transactions are processed correctly after re-establishing	15								
In case there's a true "home" button available on the device, does the home In case there's a true "button available on the device? In case there's a true "search" button available on the device, does this get In the user to some form of search within the app? Does the app behave as designed/desired if the "Battery low" message is Does the app behave as designed/desired if the sound on the device is It turned off? Does the app behave as designed/desired if the device is in airplane mode? Zo pushed Does the app behave as designed/desired if the device is in airplane mode? Can the app be de-installed from the device? Are application function as expected after re-installation? Can the app switch to different apps on the device through multitasking as designed/desired? Are all touch screen positions (buttons) working when a screen protector is vised. Network Specific Checks Does the app behave according to specification if connected to the internet through 4G? Does the app behave according to specification if connected to the internet app through 4G? Does the app behave according to specification if connected to the internet app through 3G? Does the app behave according to specification of the app is out of network reach? Does the app behave according to specification of the app is out of network reach? Update transactions are processed correctly after re-establishing		In case there's a true "back" button available on the device does the "back"							
In case there's a true "search" button available on the device, does this get 19 the user to some form of search within the app? Does the app behave as designed/desired if the "Battery low" message is 20 pushed Does the app behave as designed/desired if the sound on the device is 21 turned off? 22 Does the app behave as designed/desired if the device is in airplane mode? 23 Can the app be de-installed from the device? 24 Does the application function as expected after re-installation? 25 Can the app be found in the app store? (Check after go-live) Can the app be found in the app store? (Check after go-live) Can the app switch to different apps on the device through multitasking as 26 designed/desired? Are all touch screen positions (buttons) working when a screen protector is 27 used. Network Specific Checks Does the app behave according to specification if connected to the internet 29 through Wi-Fi? Does the app behave according to specification if connected to the internet 29 through 4G? Does the app behave according to specification if connected to the internet 30 through 3G? Does the app behave according to specification of the app is out of network 31 reach? Does the app resume working when it gets back into network reach from 32 outside reach of the network? Update transactions are processed correctly after re-establishing	17								
Does the app behave as designed/desired if the "Battery low" message is pushed Does the app behave as designed/desired if the sound on the device is turned off? 22 Does the app behave as designed/desired if the device is in airplane mode? 23 Can the app be de-installed from the device? 24 Does the application function as expected after re-installation? 25 Can the app be found in the app store? (Check after go-live) Can the app be found in the app store? (Check after go-live) Can the app switch to different apps on the device through multitasking as designed/desired? Are all touch screen positions (buttons) working when a screen protector is used. Network Specific Checks Does the app behave according to specification if connected to the internet through Wi-Fi? Does the app behave according to specification if connected to the internet through 4G? Does the app behave according to specification if connected to the internet of through 3G? Does the app behave according to specification of the app is out of network reach? Does the app resume working when it gets back into network reach from outside reach of the network? Update transactions are processed correctly after re-establishing	18								
Does the app behave as designed/desired if the sound on the device is turned off? 20 Does the app behave as designed/desired if the device is in airplane mode? 21 Can the app be de-installed from the device? 22 Does the application function as expected after re-installation? 23 Can the app be found in the app store? (Check after go-live) Can the app switch to different apps on the device through multitasking as designed/desired? Are all touch screen positions (buttons) working when a screen protector is used. Network Specific Checks Does the app behave according to specification if connected to the internet through Wi-Fi? Does the app behave according to specification if connected to the internet through 4G? Does the app behave according to specification if connected to the internet and through 3G? Does the app behave according to specification of the app is out of network reach? Does the app resume working when it gets back into network reach from a coutside reach of the network? Update transactions are processed correctly after re-establishing	19								
21 turned off? 22 Does the app behave as designed/desired if the device is in airplane mode? 23 Can the app be de-installed from the device? 24 Does the application function as expected after re-installation? 25 Can the app be found in the app store? (Check after go-live) Can the app switch to different apps on the device through multitasking as 26 designed/desired? Are all touch screen positions (buttons) working when a screen protector is used. Network Specific Checks Does the app behave according to specification if connected to the internet through Wi-Fi? Does the app behave according to specification if connected to the internet 29 through 4G? Does the app behave according to specification if connected to the internet 30 through 3G? Does the app behave according to specification of the app is out of network reach? Does the app resume working when it gets back into network reach from 32 outside reach of the network? Update transactions are processed correctly after re-establishing	20								
23 Can the app be de-installed from the device? 24 Does the application function as expected after re-installation? 25 Can the app be found in the app store? (Check after go-live) Can the app switch to different apps on the device through multitasking as designed/desired? Are all touch screen positions (buttons) working when a screen protector is used. Network Specific Checks Does the app behave according to specification if connected to the internet through Wi-Fi? Check List - Android							
ID	Summary	Test cases	Actual result	Comment			
34	Does the app still work correctly when tethering or otherwise connected to another device						
35	What happens if the app switches between networks (Wi-Fi, 3G, 4G)						
36	Does the app use standard network ports (Mail: 25, 143, 465, 993 or 995 HTTP: 80 or 443 SFTP: 22) to connect to remote services, as some providers block certain ports.						
App	specific Checks						
37	Has the app been tested on different type of devices and different versions of OS?						
38	Stability check: if the app has a list (for instance of pictures) in it, try scrolling through it at high speed.						
39	Stability check: if the app has a list (for instance of pictures) in it, try scrolling to before the first picture or behind the last picture.						
40	Is downloading of the app prevented in case it's bigger than the OS allows downloading when connected to cellular networks.						
41	Integration: does the app connect correctly to the different social networks (LinkedIn, twitter, facebook, etc).						
42	The app does not interfere with other apps when in background/multitasking mode (using GPS, playing music, etc.).						
43	Can the user print from the app (if applicable)						
44	The search option in the app displays relevant results						
45	Verify most common gestures used to control the app.						
46	What happens if you select different options at the same time (undesired multitouch, for example – select two contacts from the phone book at the same time).						
47	App name should be self explanatory						
48	Does the app limit or clean the amount of cached data.						
49	Reloading of data from remote service has been properly designed to prevent performance issues at server-side. (manual reloading of data can reduce the amount of server calls)						
50	Does the app go to sleep mode when running in the background (prevent battery drain)
